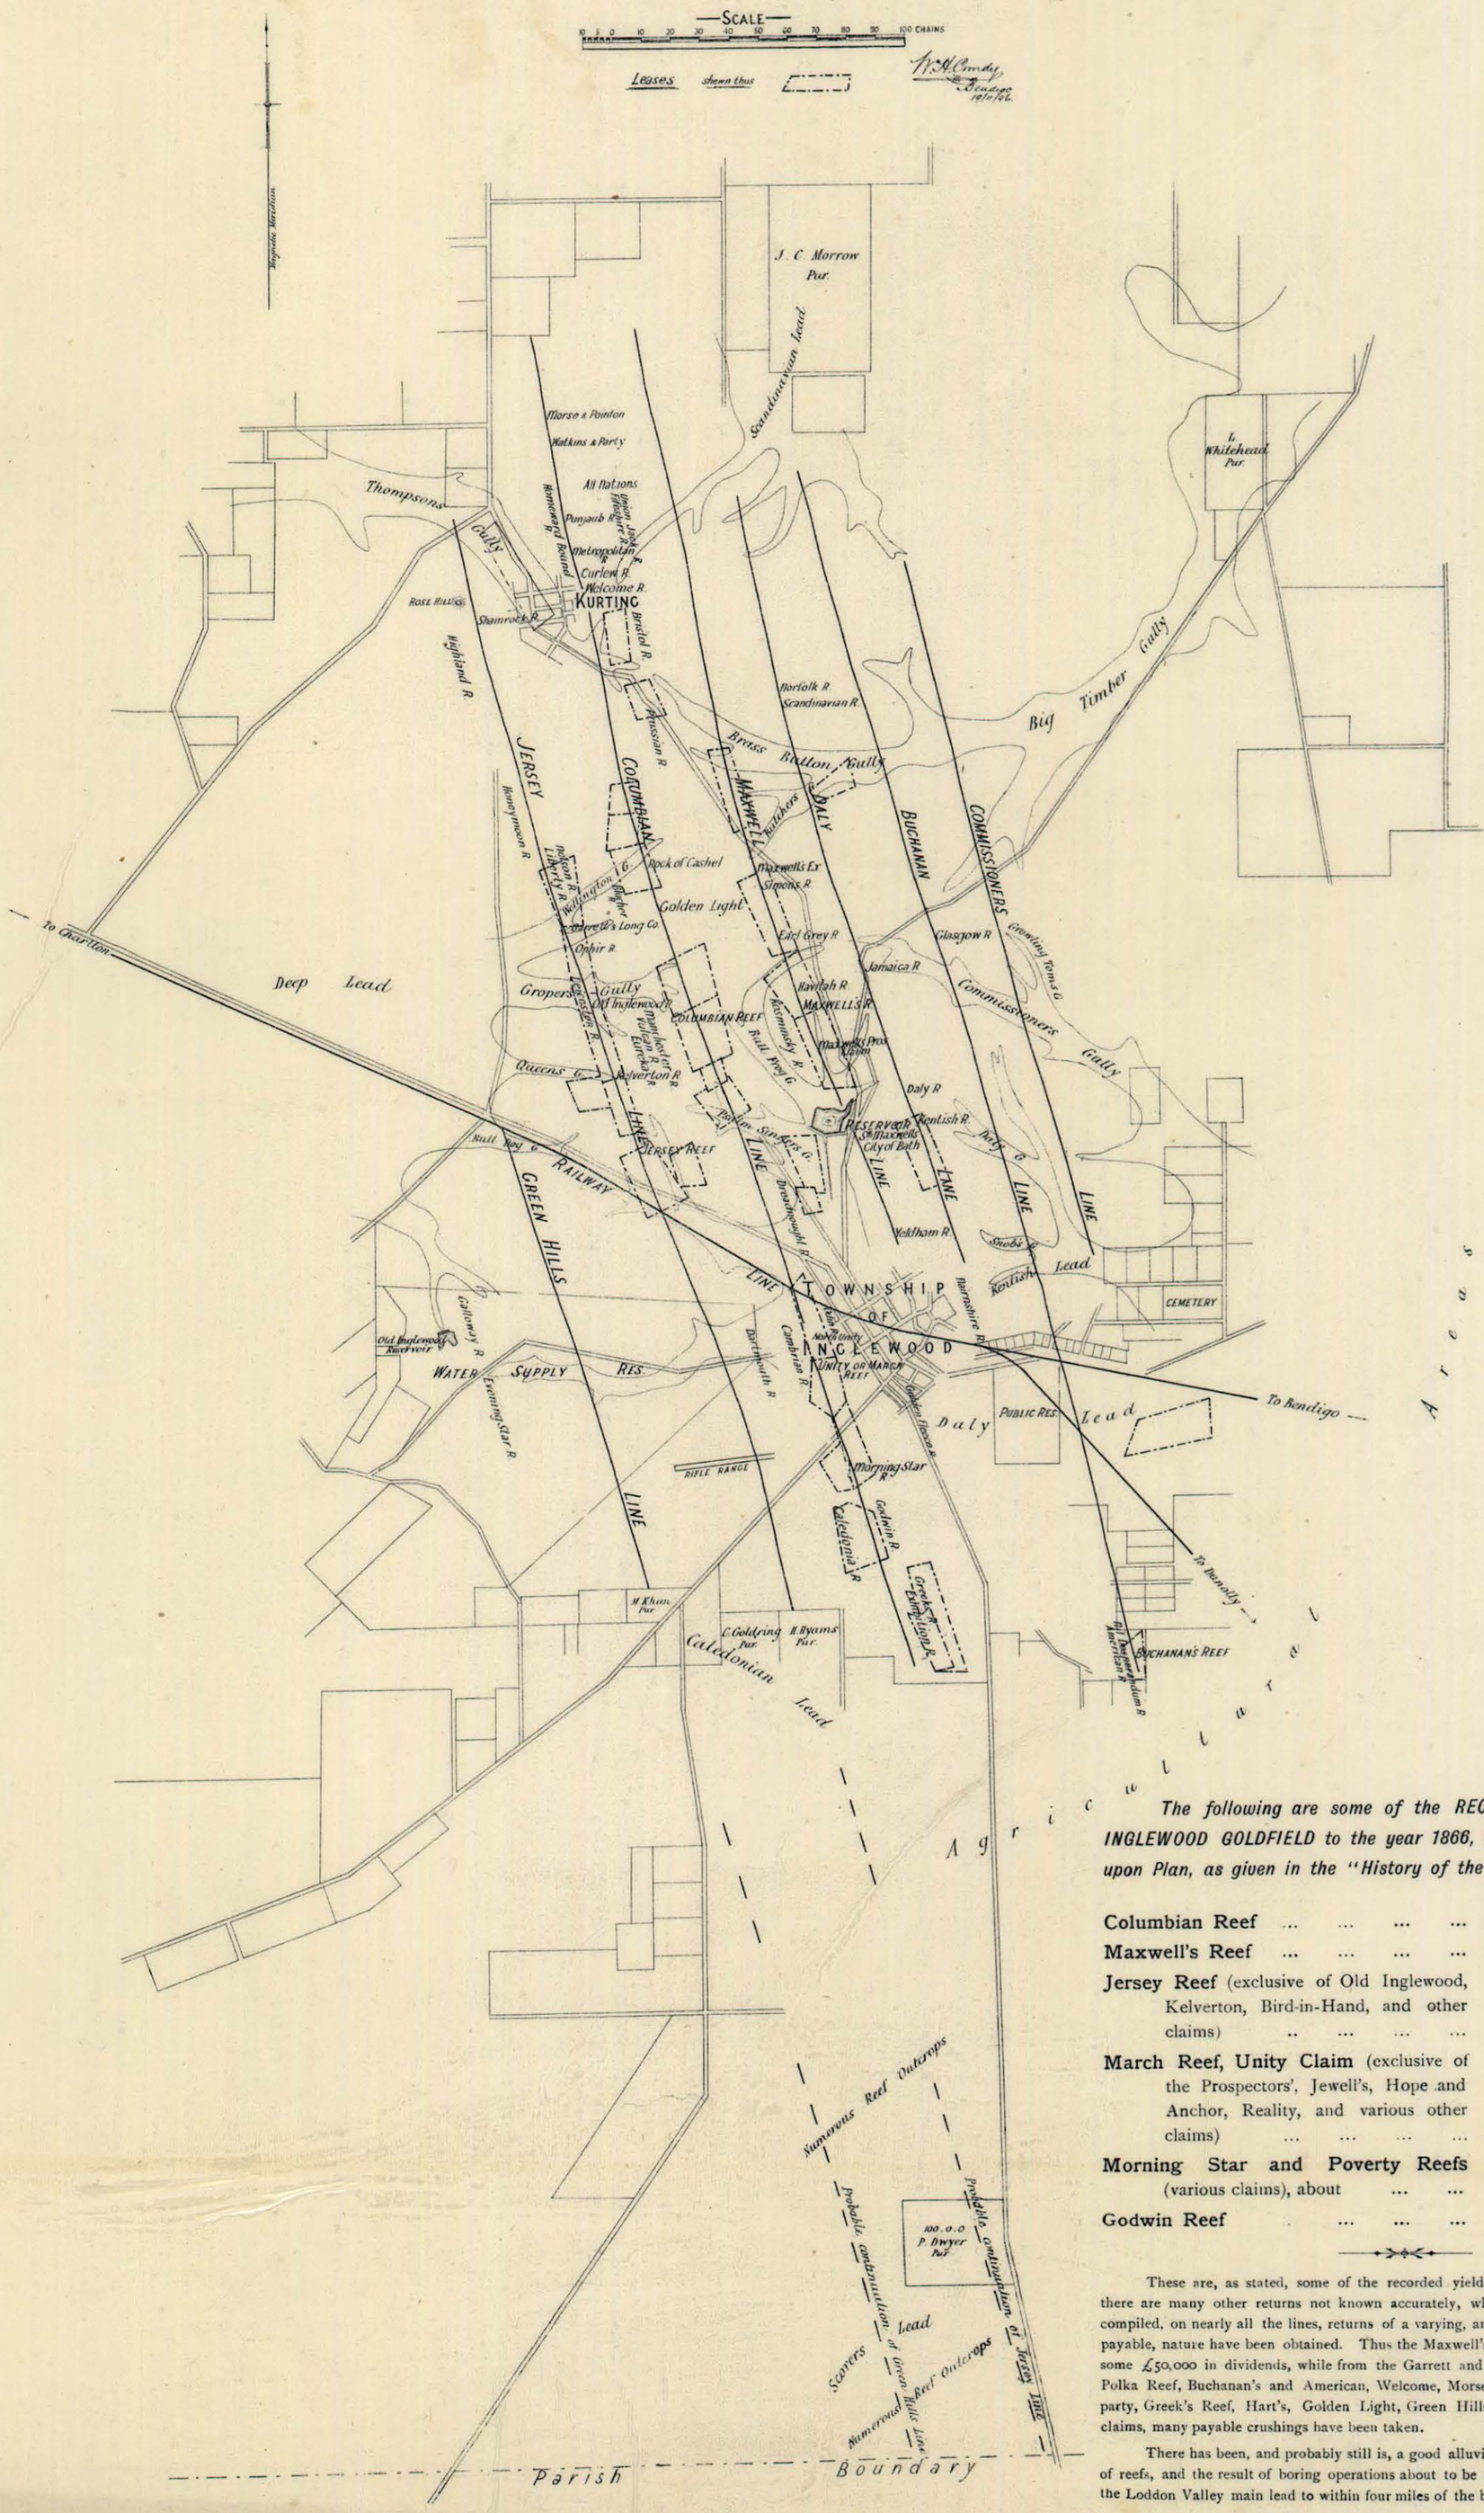
— PLAN OF —

INGLEWOOD COLD FIELD

— SHEWING LINES OF REEFS —



The following are some of the RECORDED YIELDS of the INGLEWOOD GOLDFIELD to the year 1866, from the Lines indicated upon Plan, as given in the "History of the Inglewood Reefs":—

	Tons.		Ozs.
Columbian Reef	26,179	...	54,334
Maxwell's Reef	16,278	...	27,278
Jersey Reef (exclusive of Old Inglewood, Kelverton, Bird-in-Hand, and other claims)	14,495	...	21,078
March Reef, Unity Claim (exclusive of the Prospectors', Jewell's, Hope and Anchor, Reality, and various other claims)	21,195	...	16,918
Morning Star and Poverty Reefs (various claims), about	—	...	8,000
Godwin Reef	—	...	3,883

These are, as stated, some of the recorded yields up to the date named, but there are many other returns not known accurately, while, since the "History" was compiled, on nearly all the lines, returns of a varying, and in several instances highly payable, nature have been obtained. Thus the Maxwell's Company in this period paid some £50,000 in dividends, while from the Garrett and Long's, Maxwell's Extended, Polka Reef, Buchanan's and American, Welcome, Morse and Poynton's, Watkins and party, Greek's Reef, Hart's, Golden Light, Green Hills Line, Caledonian, and other claims, many payable crushings have been taken.

There has been, and probably still is, a good alluvial yield coming from the lines of reefs, and the result of boring operations about to be commenced will probably trace the Loddon Valley main lead to within four miles of the borough.
